

Nanodropper is the first and only eyedrop bottle adaptor that creates smaller eyedrops. Studies show smaller drops reduce side effects and can help improve patient outcomes by increasing adherence.

Eyedrop bottles create drops that exceed the capacity of the human eye by five times.

Every time a patient administers one eyedrop, they are **losing approximately 80%** of their medication to wasted overflow and/or systemic absorption. This waste not only contributes to premature bottle exhaustion and financial barriers to care, but clinical research has shown that **oversized drops overdose the eye**, increasing both local and systemic side effects.

Cost and side effects are two of the largest barriers to treatment adherence, leading to **reduced patient outcomes**.

For In-Clinic AND Home Medication Use

- Compatible with Rhopressa, Lumigan, Phenylephrine, Proparicane, and many more!
- Reduce clinic costs by using smaller eyedrops
- Insurance against drug shortages and price gouging
- Less early refill requests, saving your staff valuable admin time

Safety and Regulatory

- Certifications: ISO 13485:2016, ISO 17665, ISO 9001-2015
- FDA listed: Class 1 sterile medical device
- Made with medical-grade silicone and high density polyethylene to ensure safety
- Single-bottle use only (disposable)
- Manufactured in the USA

Improving the Patient Experience

- Nanodropper minimizes waste by reducing eyedrop volume
- This triples the bottle-life and lowers medication cost by over 60%
- Smaller drops may reduce side effects and be more comfortable for your patients
- Medical-grade silicone tip is softer than the hard plastic bottle tip
- The "bullseye" color design improves contrast and may help with aiming drops
- Colored label stickers provide easy medication ID and dosing reminder
